QUALITY THOUGHT

PLAYWRIGHT - TEST-1

Name: _____ Batch No: _____

---

1) What is Automation Testing? Why do we need automation testing in a real-time project?

2) What are the prerequisites required to install Playwright in a Windows system?

3) What is Playwright? What are the advantages of Playwright compared to Selenium WebDriver?

4) You are working on an e-commerce application. Which test cases would you automate using Playwright, and which test cases would you prefer to execute manually?

5) Explain all CLI Commands in a Playwright project?

6) Explain the steps to create a Playwright project using VS Code.

7) What is playwright.config.ts? Why do we need this file in a real-time automation framework?

8) You joined a real-time project where the team needs to execute tests in Chromium, use a common base URL, run tests in headless mode, retry failed tests twice, and execute tests using four workers. How would you configure playwright.config.ts?

9) Write a basic Playwright test to launch a browser, navigate to https://www.saucedemo.com/, and verify that the login page is displayed.

10) You have written five test cases in a single .spec.ts file. One test case fails. Will the remaining test cases execute? Explain with a real-time example

11) What is headless browser execution? What is headed browser execution? Explain with real-time examples.

12) What is cross-browser testing? Why is it important in real-time projects?

13) How do you retrieve the page title and current URL in Playwright? Explain page.title() and page.url() with examples.

14) In a real-time project, which execution mode would you prefer for local development and which one for CI/CD execution? Why?

15) What is baseURL? How can you use baseURL to avoid specifying the complete application URL in every test case?

****
